

Health Checks

fit for purpose infrastructure

What is being asked of IT today?

- Consolidate
- Accommodate acquisitions/divestiture
- Migrate to Cloud
- Refresh
- Downsize
- Expand digital footprint
- Increase online communication/activity
- Meet changing regulation and privacy laws
- Reduce costs
- Optimise operation
- Support new services
- Do better with less

So... how can we help?

Start with a health check.

A technology health check is especially important when you are planning to transform the way you deliver services to your clients. Before committing dollars, ensure your infrastructure will meet the demands of that new system or app.

This is sage advice for small and large business alike. Even though their challenges may be different, the critical factor to their success is their infrastructure – reliability, capability and support.

The modern IT department continues to face constant pressure to deliver integrated technology decisions and solutions that service all the growing/changing – and at times competing – demands.

Keeping up with the pace of technology change over the years means your organisation, like many, has likely acquired its IT infrastructure piecemeal. There's nothing wrong with that, so long as you assess your IT capabilities periodically to ensure you are getting the most out of your investment and can meet additional requirements.

A Health Check will reveal whether your infrastructure is delivering to your current requirements and is sufficiently robust to support your new direction.

At Envisian our philosophy is simple: flawless delivery, every time.

Health Checks

fit for purpose infrastructure

A detailed analysis of your current physical and/or virtualised environments will identify wastage and underutilisation of your expensive IT assets. It will determine the right sizing for your needs, recommend performance improvements and, where applicable, suggest additional technologies to meet your changing business needs. Tailored to meet your specific needs, our Health Checks will validate and optimise your IT systems.

We'll recommend any changes, updates and purchases necessary to meet your current and future needs, as well as best practices and process improvements and latest ISO compliance requirements.

Here are some of the things we look at:

- Virtualised Servers
- Applications Portfolio
- Cloud Adoption
- Storage Options
- Backup and Recovery, and Disaster Recovery
- Network capability, reliability and availability – Internet access, bandwidth, and data allowance to meet projected growth
- Firewalls, virus protection, patches, spam filtering, security
- Desktops and devices age, compatibility, security and functionality, remote access
- Licensing
- Data Retention policy and procedure
- Compliance / Regulatory requirements
- Capacity Requirements

At Envisian our philosophy is simple: flawless delivery, every time.
